WHEELCHAIR CUSHIONS

SPP & SPPC

Anatomically Intelligent Design
(Shown above with AireFlow™ cover and insert removed.)

AireRx™ AireFlow™ SPP & SPPC Cushion

AireRx™ wheelchair cushions provide the state-of-the-art in Anatomically Intelligent Design, select component materials, superior contours for optimal pressure distribution and relief to help prevent skin ulcers. All AireRx™ cushions feature AireFlow™ technology, protecting your skin by removing built-up body heat and moisture, major contributors to the risk of skin ulcers.

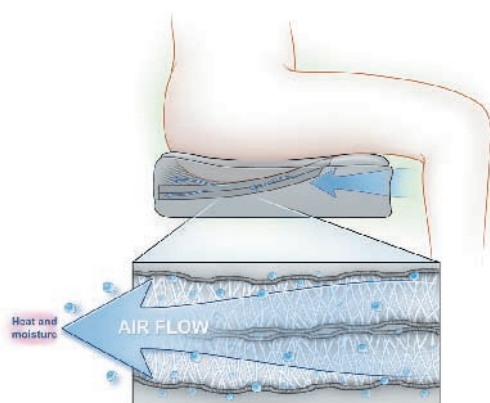

Anatomically Intelligent Design

Stronger contours and higher profiles in the AireFlow™ SPP & SPPC, supported by high density foam bolsters in each corner of the cushion, offer optimal support. The sculpted design of the cushions enables the user to sustain good sitting posture and stable position, while redistributing the user's weight away from high risk areas.

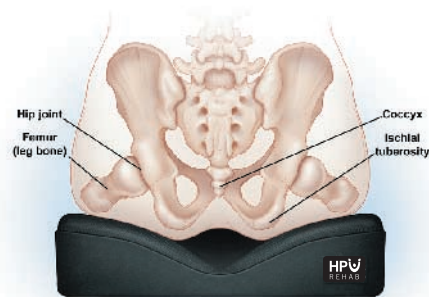

AireFlow™ Technology

The AireFlow™ SPP & SPPC cushions utilizes our “Dual Density Spacer Fabric,” delivering Cool Comfort™ and reducing heat buildup while keeping skin drier—two factors directly related to skin ulcer development. The design of the AireFlow™ SPP & SPPC cushions promotes “passive” front to rear airflow, further controlling heat and moisture retention.

All AireRx™ AireFlow™ cushions deliver... **Cool Comfort!**
an overdue clinical breakthrough™
